

Project Discovery & Requirement Clarification

AI-Based Data Analysis & School Performance Dashboard

To properly understand the scope and design the right solution, we kindly request clarification on the following points:

A. Current System & Data Availability

1. Existing System

- Do you currently have a Learning Management System (LMS)?
- Are you using any School ERP system?

2. Student Assessment Data

- Where is student assessment data currently stored?
- In what format is the data available?
(Excel sheets, Database, Google Sheets, ERP system, etc.)

3. Historical Data

- How many years of historical data are available for analysis?

4. Type of Assessments

Please briefly describe the types of assessments conducted, for example:

- Final Exams
- Quizzes
- Continuous Assessment
- Behavioral Evaluation
- Subject-wise grading
- Skill-based evaluation

B. Expected Analysis & Reporting

5. Type of Analysis Required

Please describe what kind of insights you expect from the system. For example:

- Student performance trends over time
- Weak subject identification
- Class vs class comparison
- Teacher performance comparison
- Identification of at-risk students
- Department-level performance analysis

6. Level of Intelligence Required

Do you expect:

- Basic dashboards and visual reports (Descriptive analytics)?
- Predictive insights (e.g., forecasting student performance)?
- AI-based recommendations (system suggests actions automatically)?

C. Improvement Plan (AI-Driven Recommendations)

7. When you mention “Improvement Plan”, please clarify what it should include:

- Improvement plan for students?
- Improvement plan for teachers?
- Department-level improvement?
- School-wide strategic improvement?

8. Should the system automatically:

- Suggest training programs for teachers?
- Recommend remedial classes for students?
- Identify students at risk of failure or dropout?
- Suggest curriculum improvements?

D. Staff Data Analysis

9. What type of staff data is currently tracked?

- Trainings attended
- Certifications obtained
- Performance evaluations
- Attendance records
- Years of experience

10. Should the system:

- Identify training gaps for staff?
- Compare teacher performance with student results?
- Suggest required professional development?

E. Dashboard & Access Requirements

11. Who will use the dashboard?

- Principal / School Leadership
- Teachers
- HR Department
- Board Members
- Academic Coordinators

12. Is role-based access required?

(For example: teachers can only see their class data, principal can see full school data.)

13. Do you require:

- Real-time dashboards?
- Monthly / quarterly reports?
- Data export options (PDF, Excel)?

F. AI Scope Clarification (Simplified Explanation)

To align expectations correctly, we would like to clarify the level of AI required:

14. Which level best matches your expectation?

- **Basic Automation**

Example: If a student scores below 60%, the system automatically flags them.

- **Predictive Analysis (Machine Learning)**

Example: The system predicts which students may struggle in the next exam based on past trends.

- **AI-Based Recommendations**

Example: The system suggests specific improvement actions for students or teachers.

- **Automated Report Generation (Generative AI)**

Example: The system generates written performance summaries automatically.

15. Do you require chatbot integration?

(For example: "Show me Grade 8 Math performance this semester.")

16. Should AI continuously improve by learning from new data over time?

G. Technical Infrastructure

17. Where should the system be hosted?

- On-premise (within school servers)?
- Cloud-based (AWS, Azure, GCP)?

18. Does it need integration with:

- Existing LMS?
- HR System?
- Finance/Accounting System?
- Attendance System?

19. Are there any data privacy or regulatory requirements to follow?

H. Commercial & Expansion Considerations

20. What is the expected budget range for this project?

21. What is the expected timeline for implementation?

22. Is this project for:

- One school only?
- A group of schools?

23. Is there a future plan to scale this into a larger system across multiple campuses?
